

ENVIRONMENT AND SAFETY POLICY

Puki® Technology, is aware that the most important contribution to environmental sustainability of the products and services put forward within the scope of the legal regulations that the company is obliged to comply with is that it offers various opportunities in combating environmental problems by affecting the entire stakeholder ecosystem thanks to the technology solutions it offers.

It ensures the active participation and communication of its employees on issues related to the environment, occupational health and safety in order to raise awareness of the effects they may have on the environment, occupational health and safety. It is obligatory to take necessary corrective and preventive actions regarding environmental, occupational health and safety non-conformities, occupational accidents and occupational diseases and environmental incidents.

With its Environmental and Safety Policy, **Puki® Technology** uses resources effectively and rationally to ensure the protection of the environment by minimising internal and external factors that affect environmental pollution. In order to increase environmental performance, it makes risk and opportunity assessments to continuously improve the environmental management system. As a result, it carries out continuous improvement activities.

We consider all these issues as a priority and undertake and declare that they are under the responsibility of our company.

Chairman of the Board
